

# 2017 ANNUAL WATER QUALITY REPORT

SUBURBAN-ROSEMONT | PWS ID: 3410010

CALIFORNIA  
AMERICAN WATER

WE KEEP LIFE FLOWING™

RICHARD SVINDLAND  
President

## A Message from California American Water President RICHARD SVINDLAND

Dear California American Water Customer,

Having easy access to safe, clean water is something that can be easily taken for granted. At California American Water, our top priority is providing safe, reliable drinking water to our more than 690,000 customers.

I am pleased to share with you our 2017 Consumer Confidence Report, which is a testament to the hard work and dedication of our employees who ensure high-quality drinking water.

**QUALITY:** We have rigorous safeguards in place to ensure the water we provide to you meets or surpasses increasingly stringent water quality standards. Across California, we conducted approximately 652 different tests on 25,239 water samples for 2,994 constituents last year. **We are proud and pleased to confirm that we met every primary and secondary state and federal water quality standard.**

**SERVICE:** Last year, we invested more than \$92 million in water infrastructure in the California communities we serve. This investment ensures and maintains the safety and reliability of the facilities and technology needed to draw, treat, and distribute water.

**VALUE:** While costs to provide water service continue to increase across the country, our investments help us provide high-quality water service that remains an exceptional value, costing customers about a penny per gallon.

2017 brought fires and news stories concerning lead testing in schools across California. These events solidify the notion that water is essential for public health, fire protection, economic development and overall quality of life. That is why we are proud to continue to supply water that meets or surpasses all state and federal water quality standards.

If you have any questions or concerns, you can contact us by phone, email, online at [www.californiaamwater.com](http://www.californiaamwater.com), or in person at our local Customer Center. Please take the time to review this report. It provides details about the source and quality of your drinking water, using data from water-quality testing conducted for your local system between January and December 2017.

Sincerely,

A handwritten signature in black ink, appearing to read "Richard Svindland". The signature is fluid and cursive.

RICHARD SVINDLAND  
President

# OUR COMMITMENT TO QUALITY

Once again, we proudly present our Annual Water Quality Report, also referred to as a Consumer Confidence Report (CCR). This CCR covers compliance testing completed through December 2017. We are pleased to tell you that our compliance with state and federal drinking water regulations remains exemplary. As in the past, we are committed to delivering the best quality drinking water. To that end, we remain vigilant in meeting the challenges of source water protection, water conservation, environmental compliance, sustainability and community education while continuing to serve the needs of all our water users.

## ABOUT CALIFORNIA AMERICAN WATER (CAW) AND AMERICAN WATER (AW)

California American Water, a subsidiary of American Water (NYSE: AWK), provides high-quality and reliable water and/or wastewater services. American Water is the largest and most geographically diverse publicly traded U.S. water and wastewater utility company. The company employs 6,700 dedicated professionals who provide regulated and market-based drinking water, wastewater and other related services to an estimated 15 million people in 47 states and Ontario, Canada. More information can be found by visiting [www.amwater.com](http://www.amwater.com).

A photograph of a male scientist wearing a white lab coat, safety goggles, and white gloves. He is holding a glass beaker with a liquid sample and looking at it intently. The background is a blurred industrial or laboratory setting.

# WHAT IS A CONSUMER CONFIDENCE REPORT?

The Consumer Confidence Report (CCR) is an annual water quality report containing data that California American Water and all associated water purveyors collected during the past year. CCRs let consumers know what contaminants, if any, are in their drinking water as well as any related health effects. CCRs also include details about where your water comes from and how it is treated. Additionally, they educate customers on what it takes to deliver safe drinking water and highlight the need to protect drinking water sources.

In 2017, we collected numerous samples at various sampling points in your water system. The water quality data presented is a combination of data compiled from our nationally recognized water quality laboratory and local commercial laboratories; all certified in drinking water testing by the State Board's Division of Drinking Water. If you have any questions about this report or your drinking water, please contact our Customer Service Center at (888) 237-1333.

# ABOUT YOUR WATER

The Suburban-Rosemont water system is served by deep wells that pump groundwater from aquifers here in the Sacramento Valley. California American Water uses various drinking water treatment technologies to treat the groundwater used in the Suburban-Rosemont system including granular activated carbon (GAC) to remove low levels of organic chemical contaminants, fluoridation to promote dental health, iron and manganese removal, and chlorination of the water to ensure that the water supply meets bacteriological quality standards.

California American Water also purchases surface water from the City of Sacramento for the Suburban-Rosemont system. The water from the City of Sacramento originates from the American and Sacramento Rivers. These surface water supplies are treated by conventional treatment technologies including coagulation, sedimentation and filtration (using sand and anthracite filters), lime addition for corrosion control, fluoridation to promote dental health, and chlorination for disinfection. The water supply is distributed for residential and commercial use.

## **NOTICE OF SOURCE WATER ASSESSMENT (SWA)**

An assessment of the drinking water sources in the Suburban system was completed in February 2003. The sources are considered most vulnerable to the following (associated with detected chemicals): sewer collection systems, known contaminant plumes, military installations, fertilizer, and pesticide/herbicide application.

Although not associated with any detected chemicals, the sources are also considered vulnerable to dry cleaners, plastics/synthetics producers, automobile gas stations, underground storage tanks (confirmed leaking tanks), metal plating/finishing/fabricating, and chemical/petroleum processing/storage.

A copy of the completed assessment may be viewed at California American Water, 4701 Beloit Drive, Sacramento, CA 95838.

Assessments of potential contaminating activities for the City's Sacramento River and American River water sources were completed in December 2010 and December 2008, respectively. These reports indicated that both rivers are most vulnerable to contaminants from recreational activities, urban runoff, industrial discharge, and that the Sacramento River is vulnerable to agricultural contaminants. A copy of the complete assessment is available for review in the City Clerk's office at City Hall or call (916) 808-5011 to request a summary of the assessments.

# WHAT ARE THE SOURCES OF CONTAMINANTS?

The sources of drinking water include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and can pick up substances resulting from animal or human activity and even radioactive material. In order to ensure that tap water is safe to drink, USEPA and the State Water Resources Control Board set regulations limiting the amount of certain contaminants in water provided by public water systems. Contaminants that may be present in source water include:

## **ORGANIC CHEMICAL CONTAMINANTS**

including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and may also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.

## **INORGANIC CONTAMINANTS,**

such as salts and metals, which can be naturally occurring or may result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.

## **PESTICIDES AND HERBICIDES,**

which may come from a variety of sources, such as agriculture, urban stormwater runoff, and residential uses.

## **MICROBIAL CONTAMINANTS,**

such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

## **RADIOACTIVE CONTAMINANTS,**

which can be naturally occurring or may be the result of oil and gas production and mining activities.

# FLUORIDE & LEAD

## FLUORIDE

Fluoride is a naturally occurring substance. It can be present in drinking water from two sources:

1. **By nature** when groundwater comes into contact with fluoride-containing minerals naturally present in the earth; or
2. **By a water purveyor** through addition of fluoride to the water they are providing in the distribution system.

In the Suburban-Rosemont system, fluoride is added to the water supply at concentrations based on state fluoride regulations managed by the State Water Resources Control Board, Division of Drinking Water and the Office of Oral Health. According to these agencies, when fluoride is present in drinking water at optimal levels, it has been shown to promote oral health by preventing tooth decay.

## LEAD

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. California American Water is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to two minutes before using water for drinking or cooking.

If you do so, you may wish to collect the flushed water and reuse it for another beneficial purpose, such as watering plants. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at [www.epa.gov/lead](http://www.epa.gov/lead).

# ARSENIC & NITRATES

## ARSENIC

While your drinking water meets the federal and state standard for arsenic, it does contain low levels of arsenic. The arsenic standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water. The U.S. Environmental Protection Agency

continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

---

## NITRATES

Nitrates in drinking water at levels above 10 mg/L is a health risk for infants of less than six months of age. Such nitrate levels in drinking water can interfere with the capacity of the infant's blood to carry oxygen, resulting in a serious illness; symptoms include shortness of breath and blueness of the skin. Nitrate levels above 10 mg/L may also affect the ability of the blood to carry oxygen in other individuals, such as pregnant women and those with certain specific enzyme deficiencies. If you are caring for an infant, or you are pregnant, you should ask advice from your health care provider.

A background photograph showing a kitchen sink. In the foreground, a person's hands are visible, one holding a knife and the other a tomato, as if preparing food. In the background, another person is washing vegetables under running water from a faucet. The scene is brightly lit, suggesting a clean and active kitchen environment.

# UNREGULATED CONTAMINANT MONITORING RULE

## UNREGULATED CONTAMINANT MONITORING RULE (UCMR)

The USEPA created the Unregulated Contaminants Monitoring Rule (UCMR) to assist them in determining the occurrence of unregulated contaminants in drinking water and whether new regulations are warranted. The first Unregulated Contaminants Monitoring Rule (UCMR1) testing was completed in 2003 for a list of contaminants specified by the USEPA. Unregulated contaminants are those for which the USEPA has not established drinking water standards. UCMR2 testing was conducted between November 2008 and August 2009, and UCMR3 assessment monitoring was conducted between January 2013 and December 2016. The results from the UCMR monitoring are reported directly to the USEPA. The results of this monitoring are incorporated in the data tables in this report as appropriate. For more information, contact our Customer Service Center at (888) 237-1333.

A background photograph showing two elderly women at an outdoor event. One woman, with short grey hair and wearing a light blue shirt, is smiling and holding a blue water bottle. The other woman, with short grey hair and wearing a white shirt with red patterns, is holding a clear plastic water bottle with a green label. They are both holding rolled-up blue mats. In the background, other people and a building are visible under a bright sky.

## EDUCATIONAL & SPECIAL HEALTH INFORMATION

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline at (800) 426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants may be particularly at risk for infections. These people should seek advice about drinking water from their health care providers. USEPA/CDC guidelines on appropriate means to lessen the risk of infection by microbial contaminants are available through the USEPA's Safe Drinking Water Hotline at (800) 426-4791.

# MEASUREMENTS

Water is sampled and tested consistently throughout the year to ensure the best possible quality. Contaminants are measured in:

- **Parts per million (ppm) or milligrams per liter (mg/L)**
- **Parts per billion (ppb) or micrograms per liter (µg/L)**
- **Parts per trillion (ppt) or nanograms per liter (ng/L)**
- **Grains per gallon (grains/gal)** – A measurement of water hardness often used for sizing household water softeners. One grain per gallon is equal to 17.1 mg/L of hardness.
- **MicroSiemens per centimeter (µS/cm)** – A measurement of a solution’s ability to conduct electricity.
- **Nephelometric Turbidity Units (NTU)** – A measurement of the clarity of water. Turbidity in excess of 5 NTU is noticeable to the average person.
- **PicoCuries per liter (pCi/L)** – A measurement of radioactivity in water.

### PARTS PER MILLION:

1 second  
in 12 days

### PARTS PER BILLION:

1 second  
in 32 years

### PARTS PER TRILLION:

1 second  
in 32,000 years

# HOW TO READ THIS TABLE

California American Water conducts extensive monitoring to ensure that your water meets all water quality standards. The results of our monitoring are reported in the following tables. While most monitoring was conducted in 2017, certain substances are monitored less than once per year because the levels do not change frequently. For help with interpreting this table, see the “Definition of Terms” section.

- 1 Starting with a **Substance**, read across.
- 2 **Year Sampled** is usually in 2017 or year prior.
- 3 **MCL** shows the highest level of substance (contaminant) allowed.
- 4 **MCLG** is the goal level for that substance (this may be lower than what is allowed).
- 5 **Average Amount Detected** represents the measured amount (less is better).
- 6 **Range** tells the highest and lowest amounts measured.
- 7 A **No** under **Violation** indicates government requirements were met.
- 8 **Major Sources in Drinking Water** tells where the substance usually originates.

Unregulated substances are measured, but maximum allowed contaminant levels have not been established by the government.

# Water Quality Results

## Regulated Substances

Substance (Units)	Year Sampled	MCL	PHG (MCLG)	Suburban-Rosemont			City of Sacramento		Violation	Major Sources in Drinking Water
				Average Amount Detected	Range		Average Amount Detected	Range Low - High		
					Low	High				
Aluminum (ppm)	2014-2017	1	0.6	ND	ND	0.06	ND	ND	No	Erosion of natural deposits; Residual from some surface water treatment processes
Arsenic (ppb)	2014-2017	10	0.004	2.2	ND	62	ND	ND	No	Erosion of natural deposits; runoff from orchards; Glass, and electronics production wastes
Barium (ppm)	2014-2017	1	2	ND	ND	0.1	ND	ND	No	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits.
Fluoride (ppm)	2014 - 2017	2	1	ND	ND	1.0	ND	ND	No	Erosion of natural deposits; discharge from fertilizer and aluminum factories
Hexavalent Chromium (ppb)	2014-2017	N/A <sup>1</sup>	N/A	3.8	ND	7.06	ND	ND	No	Discharge from electroplating factories, leather tanneries, wood preservation, chemical synthesis, refractory production, and textile manufacturing facilities; erosion of natural deposits.
Nitrate (as nitrogen) (ppm)	2017	10	10	3.3	ND	6.1	ND	ND	No	Runoff and leaching from fertilizer use; Leaching from septic tanks and sewage; Erosion of natural deposits
1,2-Dibromo-3-chloropropane (DBCP) (ppt)	2015-2017	200	1.7	ND	ND	30	NR	NR	No	Banned nematocide that may still be present in soils due to runoff/leaching from former use on soybeans, cotton, vineyards, tomatoes, and tree fruit
Gross Alpha Particle Activity (pCi/L)	2015-2017	15	(0)	ND	ND	5.7	ND	ND	No	Erosion of natural deposits
Uranium (pCi/L)	2014-2015	20	0.43	ND	ND	4.1	NR	NR	No	Erosion of natural deposits
Radium 228 (pCi/L)	2007, 2016	5 <sup>2</sup>	0.019	ND	ND	1.1	NR	NR	No	Erosion of natural deposits
Control of Disinfection By-Product Precursors (TOC) (ppm)	2017	Treatment requirement if average TOC>2	NA	NA <sup>3</sup>	NA		1.4		No	Various natural and man-made sources

<sup>1</sup> There is currently no MCL for hexavalent chromium. The previous MCL of 0.010 mg/L was withdrawn on September 11, 2017.

<sup>2</sup> Radium 228 does not have its own MCL. The MCL for total radium (radium 226 & radium 228) is shown. Monitoring for radium 226 was not required.

<sup>3</sup> Only surface water sources must comply with PDWS for Control of Disinfection By-Product Precursors and turbidity.

## Distribution System Monitoring (Suburban-Rosemont service area)

Substance (Units)	Year Sampled	MCL	PHG (MCLG)	Suburban-Rosemont			City of Sacramento		Violation	Major Sources in Drinking Water
				Average Amount Detected	Range		Average Amount Detected	Range Low - High		
					Low	High				
Chlorine (ppm)	2017	MRDL=4.0	MRDLG=4.0	0.68	0.20	1.16	NA	NA	No	Treatment chemical used to disinfect drinking water
Fluoride (ppm) <sup>4</sup>	2017	0.6 - 1.2 <sup>5</sup>	NA	0.86	0.68	1.0	NA	NA	No	Water additive that promotes strong teeth
Haloacetic Acids (ppb) <sup>6</sup>	2017	60	NA	ND	ND	ND	NA	NA	No	By-product of drinking water disinfection
Total Trihalomethanes (THM)(ppb) <sup>6</sup>	2017	80	NA	1	ND	1	NA	NA	No	By-product of drinking water disinfection

<sup>4</sup> California American Water adjusts the natural levels of fluoride in our water supplies to the State Water Resources Control Board, Division of Drinking Water's recommended optimum level.

<sup>5</sup> Fluoride Control Range, not an MCL.

<sup>6</sup> Compliance is based on the Locational Running Annual Average. The highest level reported in the range is the result of an individual sample. The "Average Amount Detected" is the Highest Running Annual Average

## Secondary Substances

Substance (Units)	Year Sampled	SMCL	Suburban-Rosemont			City of Sacramento		Violation	Typical Source
			Average Amount Detected	Range		Average Amount Detected	Range Low - High		
				Low	High				
Chloride (ppm)	2014-2016	500	9	3.2	31	ND	ND	No	Runoff/leaching from natural deposits; Seawater influence
Color (units)	2015-2016	15	ND	ND	5	1	ND - 1	No	Naturally-occurring organic materials
Iron (ppb)	2015	300	ND	ND	210	ND	ND	No	Leaching from natural deposits; Industrial wastes
Manganese (ppb)	2014-2016	50	ND	ND	36	ND	ND	No	Leaching from natural deposits
Odor (TON)	2015	3.0	ND	ND	2.5	ND	ND	No	Naturally-occurring organic materials
Specific Conductance (umhos/cm)	2014-2016	1600	256	150	520	96	64 - 128	No	Substances that form ions when in water; Seawater influence
Sulfate (ppm)	2014-2016	500	10	ND	32	9.0	5.9 - 13	No	Runoff/leaching from natural deposits; Industrial wastes
Total Dissolved Solids (ppm)	2014-2016	1000	181	120	330	67	47 - 86	No	Runoff/leaching from natural deposits
Turbidity (NTU)	2015-2016	5	ND	ND	0.7	0.09	0.05 - 0.47	No	Soil runoff
Vanadium (ppb) <sup>7</sup>	2015 - 2017	50 <sup>8</sup>	10	ND	15	ND	ND	No	Naturally Occurring Metal

<sup>7</sup> The babies of some pregnant women who drink water containing vanadium in excess of the notification level may have an increased risk of developmental effects, based on studies in laboratory animals.

<sup>8</sup> Notification Level, not a secondary MCL.

**Turbidity - A Measure of the Clarity of the Water (at the City of Sacramento Treatment Facility)**

Substance (Units)	Year Sampled	MCL	PHG (MCLG)	Highest Single Measurement	Violation	Typical Source
Turbidity (NTU)	2017	TT = 1.0 NTU	NA	0.13	No	Soil runoff
		Minimum 95% of samples <0.3		100.0%		

**Lead and Copper (tap water samples from Suburban - Rosemont System only)**

Substance (units)	Year Sampled	Action Level	PHG (MCLG)	Number of Samples	Amount Detected at 90th Percentile	Homes Above Action Level	Violation	Typical Source
Copper (ppm)	2016	1.3	0.3	30	0.123	0	No	Internal corrosion of household plumbing systems; Erosion of natural deposits; Leaching from wood preservatives
Lead (ppb)	2016	15	0.2	30	1	0	No	Internal corrosion of household plumbing systems; Erosion of natural deposits; Discharges from industrial manufacturers

California American Water has received requests to test drinking water for lead at 10 campuses from the Sacramento City District. We have completed testing at all campuses. California law makes school districts responsible for informing parents of lead testing results for their schools. Please contact your child's school or school district to get detailed results on lead testing at your child's school.

**Unregulated Substances (Measured on the Water Leaving the Treatment Facility or within the Distribution System)**

Substance (units)	Year Sampled	Suburban-Rosemont			City of Sacramento		Notes
		Average Amount Detected	Range		Average Amount Detected	Range Low - High	
			Low	High			
1,4-Dioxane (ppb)	2014 - 2015	0.01	ND	0.10	ND	ND - 0.2	Some people who use water containing 1,4-dioxane in excess of the Notification Level (1 ppb) over many years may experience liver or kidney problems and may have an increased risk of getting cancer, based on studies in laboratory animals.
4-androstene-3,17-dione (ppb)	2014 - 2015	ND	ND	0.0004	ND	ND - 0.00034	Steroidal hormone naturally produced in the human body; and used as an anabolic steroid and a dietary supplement
Bromochloromethane	2014 - 2015	0.004	ND	0.09	ND	ND	Used as a fire-extinguishing fluid, an explosive suppressant, and as a solvent in the manufacturing of pesticides
Chlorate (ppb)	2014 - 2015	199	21	1180	ND	ND - 61	Oxidant used in pyrotechnics and possible by-product of water treatment
Chlorodifluoromethane (ppb)	2014 - 2015	0.004	ND	0.12	ND	ND	Used as a refrigerant, as a low-temperature solvent, and in fluorocarbon resins
Chloromethane (ppb)	2014 - 2015	0.02	ND	0.40	ND	ND	Used as foaming agent, in production of other substances; byproduct of water disinfection
Chromium (ppb)	2014 - 2015	3.6	ND	6.1	ND	ND	Runoff/leaching from natural deposits or discharge from Industrial Facilities
Chromium Hexavalent (ppb)	2014 - 2015	3.3	ND	5.5	ND	ND	Runoff/leaching from natural deposits or discharge from Industrial Facilities
Molybdenum (ppb)	2014 - 2015	0.12	ND	1.9	ND	ND - 1	Naturally-occurring element found in ores and present in plants, animals and bacteria; commonly used form molybdenum trioxide used as a chemical reagent
Strontium (ppb)	2014 - 2015	322	130	1000	134	48 - 370	Naturally-occurring element
Testosterone (ppb)	2014	ND	ND	ND	ND	ND - 0.00026	Naturally-occurring metal
Vanadium (ppb)	2014 - 2015	11	ND	17	7.7	0.4 - 38	The babies of some pregnant women who drink water containing vanadium in excess of the Notification Level (50 ppb) may have an increased risk of developmental effects, based on studies in laboratory animals.

**Additional Constituents**

This table shows average levels of additional water quality parameters that are often of interest to consumers. The averages shown are calculated from the levels detected at each source used to supply water is 2017. Values may vary from day-to-day. There are no health-based limits for these substance in drinking water.

Substance (Units)	Year Sampled	Suburban-Rosemont			City of Sacramento	
		Average Amount Detected	Range		Average Amount Detected	Range Low - High
			Low	High		
Alkalinity as CaCO3 (ppm)	2015 - 2017	96	58	190	31	19 - 43
Calcium (ppm)	2015 - 2017	27	15	62	13	8.8 - 17
Magnesium (ppm)	2015 - 2017	8.3	3.8	19	2.5	1.1 - 3.9
pH	2015 - 2017	8.0	7.8	8.1	NR	NR
Silica (ppm)	2015 - 2017	48	36	69	NR	NR
Sodium (ppm)	2015 - 2017	13	7.0	23	3.8	1.8 - 5.8
Total Hardness as CaCO3 (ppm)	2015 - 2017	102	54	220	38	24 - 51
Total Hardness as CaCO3 (grains/gallon)	2015 - 2017	6.0	3.2	13	2.2	1.4 - 3.0

# DEFINITION OF TERMS

**Action Level (AL):** The concentration of a contaminant, which, if exceeded, triggers treatment or other requirements, that a water system must follow.

**DDW:** Division of Drinking Water

**LRAA:** Locational Running Annual Average

**Maximum Contaminant Level (MCL):** The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology. Secondary MCLs (SMCL) are set to protect the odor, taste, and appearance of drinking water.

**Maximum Contaminant Level Goal (MCLG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

**Maximum Residual Disinfectant Level (MRDL):** The highest level of disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

**Maximum Residual Disinfectant Level Goal (MRDLG):** The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**MFL:** Million fibers per liter.

**micromhos per centimeter ( $\mu\text{mhos/cm}$ ):** A measure of electrical conductance.

**NA:** Not applicable

**N/A:** No data available

**ND:** Not detected

**NR:** Not required

**Nephelometric Turbidity Units (NTU):** Measurement of the clarity, or turbidity, of the water.

**Notification Level (NL):** The concentration of a

contaminant, which, if exceeded, requires notification to DDW and the consumer. Not an enforceable standard.

**pH:** A measurement of acidity, 7.0 being neutral.

**picocuries per liter (pCi/L):** Measurement of the natural rate of disintegration of radioactive contaminants in water (also beta particles).

**parts per billion (ppb):** One part substance per billion parts water, or micrograms per liter.

**parts per million (ppm):** One part substance per million parts water, or milligrams per liter.

**parts per trillion (ppt):** One part substance per trillion parts water, or nanograms per liter.

**Primary Drinking Water Standard (PDWS):** MCLs for contaminants that affect health along with their monitoring and reporting requirements and water treatment requirements.

**Public Health Goal (PHG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California EPA.

**RAA:** Running Annual Average

**Secondary Maximum Contaminant Level (SMCL):** Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

**SWRCB:** State Water Resources Control Board

**TON:** Threshold Odor Number

**Total Dissolved Solids (TDS):** An overall indicator of the amount of minerals in water.

**Treatment Technique (TT):** A required process intended to reduce the level of a contaminant in drinking water.

**Variations and Exemptions:** State or USEPA permission not to meet an MCL or utilize a treatment technique under certain conditions.

**%:** Percent
