

# 2017 ANNUAL WATER QUALITY REPORT

WEST PLACER | PWS ID: 3110150

CALIFORNIA  
AMERICAN WATER

WE KEEP LIFE FLOWING™

RICHARD SVINDLAND  
President

## A Message from California American Water President RICHARD SVINDLAND

Dear California American Water Customer,

Having easy access to safe, clean water is something that can be easily taken for granted. At California American Water, our top priority is providing safe, reliable drinking water to our more than 690,000 customers.

I am pleased to share with you our 2017 Consumer Confidence Report, which is a testament to the hard work and dedication of our employees who ensure high-quality drinking water.

**QUALITY:** We have rigorous safeguards in place to ensure the water we provide to you meets or surpasses increasingly stringent water quality standards. Across California, we conducted approximately 652 different tests on 25,239 water samples for 2,994 constituents last year. **We are proud and pleased to confirm that we met every primary and secondary state and federal water quality standard.**

**SERVICE:** Last year, we invested more than \$92 million in water infrastructure in the California communities we serve. This investment ensures and maintains the safety and reliability of the facilities and technology needed to draw, treat, and distribute water.

**VALUE:** While costs to provide water service continue to increase across the country, our investments help us provide high-quality water service that remains an exceptional value, costing customers about a penny per gallon.

2017 brought fires and news stories concerning lead testing in schools across California. These events solidify the notion that water is essential for public health, fire protection, economic development and overall quality of life. That is why we are proud to continue to supply water that meets or surpasses all state and federal water quality standards.

If you have any questions or concerns, you can contact us by phone, email, online at [www.californiaamwater.com](http://www.californiaamwater.com), or in person at our local Customer Center. Please take the time to review this report. It provides details about the source and quality of your drinking water, using data from water-quality testing conducted for your local system between January and December 2017.

Sincerely,

A handwritten signature in black ink, appearing to read "Richard Svindland". The signature is fluid and cursive.

RICHARD SVINDLAND  
President

# OUR COMMITMENT TO QUALITY

Once again, we proudly present our Annual Water Quality Report, also referred to as a Consumer Confidence Report (CCR). This CCR covers compliance testing completed through December 2017. We are pleased to tell you that our compliance with state and federal drinking water regulations remains exemplary. As in the past, we are committed to delivering the best quality drinking water. To that end, we remain vigilant in meeting the challenges of source water protection, water conservation, environmental compliance, sustainability and community education while continuing to serve the needs of all our water users.

## ABOUT CALIFORNIA AMERICAN WATER (CAW) AND AMERICAN WATER (AW)

California American Water, a subsidiary of American Water (NYSE: AWK), provides high-quality and reliable water and/or wastewater services. American Water is the largest and most geographically diverse publicly traded U.S. water and wastewater utility company. The company employs 6,700 dedicated professionals who provide regulated and market-based drinking water, wastewater and other related services to an estimated 15 million people in 47 states and Ontario, Canada. More information can be found by visiting [www.amwater.com](http://www.amwater.com).

A photograph of a male scientist wearing a white lab coat, safety goggles, and white gloves. He is holding a glass beaker with a liquid sample and looking at it intently. The background is a blurred industrial or laboratory setting.

# WHAT IS A CONSUMER CONFIDENCE REPORT?

The Consumer Confidence Report (CCR) is an annual water quality report containing data that California American Water and all associated water purveyors collected during the past year. CCRs let consumers know what contaminants, if any, are in their drinking water as well as any related health effects. CCRs also include details about where your water comes from and how it is treated. Additionally, they educate customers on what it takes to deliver safe drinking water and highlight the need to protect drinking water sources.

In 2017, we collected numerous samples at various sampling points in your water system. The water quality data presented is a combination of data compiled from our nationally recognized water quality laboratory and local commercial laboratories; all certified in drinking water testing by the State Board's Division of Drinking Water. If you have any questions about this report or your drinking water, please contact our Customer Service Center at (888) 237-1333.

# ABOUT YOUR WATER

Water in the West Placer system is purchased from the Placer County Water Agency through the City of Roseville. This water comes from the Folsom Lake Reservoir. Drinking water treatment technologies used by the City of Roseville include coagulation, sedimentation, filtration, and disinfection. The pH of the water is adjusted to control corrosion in the distribution system, and fluoride is added to promote dental health.

## **NOTICE OF SOURCE WATER ASSESSMENT (SWA)**

A source water assessment was conducted for the City of Roseville's water supply from Folsom Lake in December 2008. The source is considered most vulnerable to the following (associated with contaminants detected in the water supply): Folsom Lake State Recreation Area facilities (marina, restrooms, recreational areas, parking lots, and storm drains) and residential sewer and septic systems.

Although not associated with any detected contaminants, the source is also considered vulnerable to the following: illegal activities and dumping, fertilizer/pesticide/herbicide application, and high-density housing developments.

A copy of the complete source water assessment may be viewed at the California Department of Public Health, 1616 Capitol Avenue, Sacramento, CA 95899-7413.

You may request that a summary of the assessment be sent to you by contacting the City of Roseville Water Department at (916) 774-5750.

# WHAT ARE THE SOURCES OF CONTAMINANTS?

The sources of drinking water include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and can pick up substances resulting from animal or human activity and even radioactive material. In order to ensure that tap water is safe to drink, USEPA and the State Water Resources Control Board set regulations limiting the amount of certain contaminants in water provided by public water systems. Contaminants that may be present in source water include:

## **ORGANIC CHEMICAL CONTAMINANTS**

including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and may also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.

## **INORGANIC CONTAMINANTS,**

such as salts and metals, which can be naturally occurring or may result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.

## **PESTICIDES AND HERBICIDES,**

which may come from a variety of sources, such as agriculture, urban stormwater runoff, and residential uses.

## **MICROBIAL CONTAMINANTS,**

such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

## **RADIOACTIVE CONTAMINANTS,**

which can be naturally occurring or may be the result of oil and gas production and mining activities.

# FLUORIDE & LEAD

## FLUORIDE

Fluoride is a naturally occurring substance. It can be present in drinking water from two sources:

1. **By nature** when groundwater comes into contact with fluoride-containing minerals naturally present in the earth; or
2. **By a water purveyor** through addition of fluoride to the water they are providing in the distribution system.

West Placer water purchased from PCWA is fluoridated; fluoride is added to the water supply at concentrations based on state fluoride regulations managed by the State Water Resources Control Board, Division of Drinking Water and the Office of Oral Health. According to these agencies, when fluoride is present in drinking water at optimal levels, it has been shown to promote oral health by preventing tooth decay.

---

## LEAD

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. California American Water is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to two minutes before using water for drinking or cooking.

If you do so, you may wish to collect the flushed water and reuse it for another beneficial purpose, such as watering plants. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at [www.epa.gov/lead](http://www.epa.gov/lead).

# CRYPTOSPORIDIUM

## CRYPTOSPORIDIUM

Cryptosporidium is a microbial pathogen found in surface waters throughout the U.S. Although filtration removes Cryptosporidium, the most commonly used filtration methods cannot guarantee 100% removal. Monitoring indicates the presence of these organisms in source water and/or finished water. Current test methods do not allow us to determine if the organisms are dead or if they are capable of causing disease. Ingestion of Cryptosporidium may cause cryptosporidiosis, an abdominal infection. Symptoms of infection include nausea, diarrhea, and abdominal cramps. Most healthy individuals can

overcome the disease within a few weeks. However, immunocompromised people are at greater risk of developing life-threatening illness. We encourage immunocompromised individuals to consult their health care provider regarding appropriate precautions to take to avoid infection. Cryptosporidium must be ingested to cause disease, and it may be spread through means other than drinking water. You can obtain more information on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants by calling the USEPA's Safe Drinking Water Hotline (800) 426-4791.

A background photograph showing two elderly women in a bright, outdoor setting. One woman, with short grey hair and wearing a light blue shirt, is smiling and holding a blue water bottle. The other woman, partially visible on the right, is holding a clear plastic water bottle with a green label. They appear to be at a community event or festival, with other people and structures blurred in the background.

## EDUCATIONAL & SPECIAL HEALTH INFORMATION

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline at (800) 426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants may be particularly at risk for infections. These people should seek advice about drinking water from their health care providers. USEPA/CDC guidelines on appropriate means to lessen the risk of infection by microbial contaminants are available through the USEPA's Safe Drinking Water Hotline at (800) 426-4791.

# MEASUREMENTS

Water is sampled and tested consistently throughout the year to ensure the best possible quality. Contaminants are measured in:

- **Parts per million (ppm) or milligrams per liter (mg/L)**
- **Parts per billion (ppb) or micrograms per liter (µg/L)**
- **Parts per trillion (ppt) or nanograms per liter (ng/L)**
- **Grains per gallon (grains/gal)** – A measurement of water hardness often used for sizing household water softeners. One grain per gallon is equal to 17.1 mg/L of hardness.
- **MicroSiemens per centimeter (µS/cm)** – A measurement of a solution’s ability to conduct electricity.
- **Nephelometric Turbidity Units (NTU)** – A measurement of the clarity of water. Turbidity in excess of 5 NTU is noticeable to the average person.
- **PicoCuries per liter (pCi/L)** – A measurement of radioactivity in water.

### PARTS PER MILLION:

1 second  
in 12 days

### PARTS PER BILLION:

1 second  
in 32 years

### PARTS PER TRILLION:

1 second  
in 32,000 years

# HOW TO READ THIS TABLE

California American Water conducts extensive monitoring to ensure that your water meets all water quality standards. The results of our monitoring are reported in the following tables. While most monitoring was conducted in 2017, certain substances are monitored less than once per year because the levels do not change frequently. For help with interpreting this table, see the “Definition of Terms” section.

- 1 Starting with a **Substance**, read across.
- 2 **Year Sampled** is usually in 2017 or year prior.
- 3 **MCL** shows the highest level of substance (contaminant) allowed.
- 4 **MCLG** is the goal level for that substance (this may be lower than what is allowed).
- 5 **Average Amount Detected** represents the measured amount (less is better).
- 6 **Range** tells the highest and lowest amounts measured.
- 7 A **No** under **Violation** indicates government requirements were met.
- 8 **Major Sources in Drinking Water** tells where the substance usually originates.

Unregulated substances are measured, but maximum allowed contaminant levels have not been established by the government.

# Water Quality Results

## Regulated Substances-Distribution System Monitoring

Substance, (units)	Year Sampled	MCL	PHG (MCLG)	West Placer		City of Roseville		Violation	Major Sources in Drinking Water
				Average Amount Detected	Range Low - High	Average Amount Detected	Range Low - High		
Chlorine (ppm)	2017	MRDL = 4.0	MRDLG = 4.0	0.70	0.31 - 0.99	0.77	0.11 - 1.28	No	Treatment chemical used to disinfect drinking water
Control of Disinfection By-Product Precursors (TOC) (ppm)	2017	Treatment requirement if average TOC >2	NA	NA	NA	1	0.7 - 1.4	No	Various natural and man-made sources
Fluoride (ppm) <sup>1</sup>	2017	0.6 - 1.2 <sup>2</sup>	NA	0.69	0.60 - 0.78	0.66	0.07 - 0.88	No	Water additive which promotes strong teeth
Haloacetic Acids (ppb) <sup>3</sup>	2017	60	NA	26	16 - 29	27	18 - 37	No	By-product of drinking water disinfection
Total Trihalomethanes (TTHM) (ppb) <sup>3</sup>	2017	80	NA	56	30 - 57	46	24 - 68	No	By-product of drinking water disinfection

<sup>1</sup> The City of Roseville adjusts the natural level of fluoride in our water supply to be within the State Water Resources Control Board, Division of Drinking Water's recommended Fluoride Control Range

<sup>2</sup> Fluoride Control Range, not an MCL.

<sup>3</sup> Average Amount Detected is the Highest Running Annual Average

## Secondary Substances

Substance, (units)	Year Sampled	SMCL	West Placer *		City of Roseville		Violation	Major Sources in Drinking Water
			Average Amount Detected	Range Low - High	Average Amount Detected	Range Low - High		
Color (units)	2015	15	ND	ND	NR	NR	No	Naturally occurring organic material
Chloride (ppm)	2015, 2017	500	5.3	5.3	1.6	NA	No	Runoff/leaching from natural deposits; Seawater influence
Odor (TON)	2015, 2017	3	2.3	2.3	ND	ND	No	Naturally occurring organic material
Specific Conductance (mmhos/cm)	2015, 2017	1600	110	110	66	NA	No	Substances that form ions when in water; Seawater influence
Sulfate (ppm)	2015, 2017	500	11	11	4.3	NA	No	Runoff/leaching from natural deposits; Industrial wastes
Total Dissolved Solids (ppm)	2015, 2017	1000	64	64	32	24 - 44	No	Runoff/leaching from natural deposits
Turbidity (NTU)	2015	5	0.13	0.13	ND	0.02 - 0.20	No	Runoff and leaching from fertilizer use; Leaching from septic tanks and sewage; Erosion of natural deposits

\*Water quality monitoring performed by California American Water where the City of Roseville water enters the West Placer system

## Turbidity – A Measure of the Clarity of the Water (at the City of Roseville Treatment Facility)

Substance (Units)	Year Sampled	MCL	PHG (MCLG)	Highest Single Measurement	Violation	Typical Source
Turbidity (NTU)	2017	TT = 1.0 NTU	NA	0.53	No	Soil runoff
		TT = 95% of samples < 0.3 NTU		99.99%		

## Lead and Copper (tap water samples from the West Placer distribution system)

Substance, (units)	Year Sampled	Action Level	PHG (MCLG)	Number of Samples	Amount Detected (90th Percentile)	Homes Above Action Level	Violation	Typical Source
Copper (ppm)	2016	1.3	0.3	21	0.027	0	No	Internal corrosion of household plumbing systems; Erosion of natural deposits; Leaching from wood preservatives
Lead (ppb)	2016	15	0.2	21	6.0	0	No	Internal corrosion of household plumbing systems; Erosion of natural deposits; Discharges from industrial manufacturers

California American Water has received request to test drinking water for lead at 1 campus from the Center Unified School Districts. We have completed testing at this campus. California law makes school districts responsible for informing parents of lead testing results for their schools. Please contact your child's school or school district to get detailed results on lead testing at your child's school.

**Unregulated Substances (Measured on the Water Leaving the City of Roseville Treatment Facility or within the City of Roseville Distribution System)**

Substance (units)	Year Sampled	West Placer		City of Roseville		Major Sources In Drinking Water
		Average Amount Detected	Range Low-High	Average Amount Detected	Range Low-High	
Vanadium (ppb)	2013-2014	NA	NA	0.44	0.26 - 0.69	Naturally Occuring Metal
Strontium (ppb)	2013-2014	NA	NA	41	32 - 53	Naturally Occuring Metal
Chromium (ppb)	2013-2014	NA	NA	1.05	ND - 4.2	Runoff/leaching from natural deposits or discharge from Industrial Facilities
Hexavalent Chromium (ppb)	2013-2014	NA	NA	0.025	ND - 0.051	Runoff/leaching from natural deposits or discharge from Industrial Facilities
Chlorate (ppb)	2013-2014	NA	NA	202	160 - 250	Oxidant used in pyrotechnics and possible by-product of water treatment

**Additional Water Quality Parameters of Interest**

This table shows average levels of additional water quality parameters which are often of interest to consumers. The averages shown here are calculated from the levels detected. Values may vary from day to day. There are no health-based limits for these substances in drinking water.

Substance, (units)	Year Sampled	West Placer*		City of Roseville	
		Average Amount Detected	Range Low-High	Average Amount Detected	Range Low-High
Alkalinity as CaCO3 (ppm)	2015, 2017	33	NA	23	16 - 34
Calcium (ppm)	2015, 2017	13	NA	8	NA
Magnesium (ppm)	2015	2	NA	1	NA
pH	2015 - 2016	8.0	NA	8.5	7.5 - 9.3
Sodium (ppm)	2015	4.8	NA	3.3	NA
Total Hardness as CaCO3 (ppm)	2015 - 2016	41	NA	22	13 - 39
Total Hardness as CaCO3 (grains/ gallon)	2015 - 2016	2.4	NA	1.3	0.76 - 2.3
Aggressive Index	2017	NA	NA	10.0	NA
Langlier Index	2017	NA	NA	-1.5	NA

# DEFINITION OF TERMS

**Action Level (AL):** The concentration of a contaminant, which, if exceeded, triggers treatment or other requirements, that a water system must follow.

**DDW:** Division of Drinking Water

**LRAA:** Locational Running Annual Average

**Maximum Contaminant Level (MCL):** The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology. Secondary MCLs (SMCL) are set to protect the odor, taste, and appearance of drinking water.

**Maximum Contaminant Level Goal (MCLG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

**Maximum Residual Disinfectant Level (MRDL):** The highest level of disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

**Maximum Residual Disinfectant Level Goal (MRDLG):** The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**MFL:** Million fibers per liter.

**micromhos per centimeter ( $\mu\text{mhos/cm}$ ):** A measure of electrical conductance.

**NA:** Not applicable

**N/A:** No data available

**ND:** Not detected

**NR:** Not required

**Nephelometric Turbidity Units (NTU):** Measurement of the clarity, or turbidity, of the water.

**Notification Level (NL):** The concentration of a contaminant, which, if exceeded, requires notification to DDW and the consumer. Not an enforceable standard.

**pH:** A measurement of acidity, 7.0 being neutral.

**picocuries per liter (pCi/L):** Measurement of the natural rate of disintegration of radioactive contaminants in water (also beta particles).

**parts per billion (ppb):** One part substance per billion parts water, or micrograms per liter.

**parts per million (ppm):** One part substance per million parts water, or milligrams per liter.

**parts per trillion (ppt):** One part substance per trillion parts water, or nanograms per liter.

**Primary Drinking Water Standard (PDWS):** MCLs for contaminants that affect health along with their monitoring and reporting requirements and water treatment requirements.

**Public Health Goal (PHG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California EPA.

**RAA:** Running Annual Average

**Secondary Maximum Contaminant Level (SMCL):** Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

**SWRCB:** State Water Resources Control Board

**TON:** Threshold Odor Number

**Total Dissolved Solids (TDS):** An overall indicator of the amount of minerals in water.

**Treatment Technique (TT):** A required process intended to reduce the level of a contaminant in drinking water.

**Variations and Exemptions:** State or USEPA permission not to meet an MCL or utilize a treatment technique under certain conditions.

**%:** Percent
